Challenge #3: Layout and Menu Elements

Description of the Activity

For this challenge, I applied HTML layout and navigation menu elements to my existing website, **All About Green**. The goal was to organize the website into clear sections and make it easier for visitors to navigate and explore its content.

Implementation and Features

1. Header and Hero Section

I created a header featuring a background video, a welcome message, and an exploration button to introduce the website.

2. Navigation Menu

I added a navigation menu containing links to Home, Shades of Green, Green Facts, My Green Story, and Gallery. These links allow visitors to move directly to different sections of the website.

3. Main Page Layout

I used HTML5 semantic elements, including <main>, <section>, and <aside>, to organize the website's content. The main content is displayed alongside a sidebar containing a short reminder and personal message.

4. Content Sections

I organized the website into different sections, including a color palette of eight green shades, five interesting green facts, and my personal story about discovering Olive Green.

5. Green Gallery

I added four nature photographs to create a visual gallery. The images are arranged in a two-column layout using CSS Grid, with captions describing each photograph.

6. Footer

I added a footer containing the website title and a short message to complete the page layout.

CSS Styling and Responsive Design

I used CSS to improve the website's appearance through colors, spacing, borders, shadows, hover effects, and grid layouts. I also applied responsive design using media queries so that the website can adjust to smaller screen sizes.

Conclusion

Through this activity, I learned how HTML layout elements and navigation menus help organize website content. I also gained practical experience using CSS Grid, semantic HTML, and responsive design to create a more organized and user-friendly website.
