Challenge #1: Goal

Name: Shane N. Soliva

Website Title: All About Green

Website Overview

All About Green is a personal website about the color green. It will feature different shades of green, interesting facts about the color, my personal story about how I became interested in green, and a small gallery of green-themed photographs.

Goals and Objectives

1. To create an attractive and easy-to-use website focused on the color green.
2. To present different shades of green with their names and color codes.
3. To share interesting facts about the color green.
4. To tell my personal story about how I developed an interest in green.
5. To include nature-themed photographs and background videos.
6. To apply the HTML, CSS, media, forms, and responsive-design concepts required in the activities.

Planned Website Sections

Home: A welcome section with a nature-themed background video.
Shades of Green: A selection of green shades, names, and color codes.
Green Facts: Short and interesting facts about green.
My Green Story: My personal story about how I became fond of green.
Gallery: A collection of green-themed photographs.

Design and Development

The website will use forest green as its main color, with cream as a supporting background and a few additional shades such as olive and sage green. It will have a minimalist and elegant appearance, simple navigation, readable text, and nature-themed videos and images. The website will be created using Visual Studio Code with HTML/XHTML and CSS, adding JavaScript only when needed.

Development Plan

The website will be developed step by step by completing the twelve assigned challenges. Each challenge will be organized and submitted according to the instructor's requirements. After completing the challenges, the features will be combined into the final website.
