Challenge #6: HTML Styles – CSS

The objective of this challenge is to apply different CSS methods to improve the appearance and design of our All About Green website. We implemented the three types of CSS: Inline CSS, which styles individual HTML elements; Internal CSS, which applies styles within the HTML document using the <style> tag; and External CSS, which uses a separate style.css file to organize and manage the website's design. These methods helped make the website more attractive, organized, and visually consistent.

```
<!-- INTERNAL CSS -->
<style>
    /* Styles the second paragraph in the footer */
    #footer p:last-child {
        font-size: 14px;
        letter-spacing: 0.3px;
    }
</style>
```

```
<!-- INLINE CSS -->
<p class="story-intro" style="letter-spacing: 0.5px;">
    It all started with a gate.
</p>

<p>
    One ordinary day, while walking home from school
    with my classmates, something caught my attention.
    It was a green gate along the street. But it wasn't
    just any shade of green. There was something about
```

```
/* EXTERNAL CSS EXAMPLE */
.sidebar .sidebar-quote {
    font-size: 17px;
    font-style: italic;
    line-height: 1.8;
    border-left: 3px solid #91A875;
    padding-left: 14px;
}
```
